Budgeting Assistance Services

Reliant Engineering, P.A. offers business budget development using the industry proven method of Risk Assessment.

Risk Assessment is a process used to determine the Risk Level of Critical Issues. Information is obtained and analyzed from various sources. The products of the Risk Assessment include the Critical Issues List, Risk Grid, and any Inspection Recommendations.

The **Critical Issues List** is a list of prioritized plant Critical Issues. The list provides an issue explanation, comments, recommended action/status, Consequences, Probability, Risk Level and other pertinent information. **Critical Issues** are concerns that pose a risk to the operating facility. These issues typically require substantial funding, engineering assistance or upper management attention.

The **Risk Grid** is a one page management summary sheet that graphically communicates the operating facility's Critical Issues. The Risk Assessment product that graphically communicates the Risk Level of Critical Equipment.
